EMPLOYMENT

Wunderman Thompson Commerce Bellevue, WA
Software Developer - Cloud Engineering Nov. 2020 to Current

Wunderman Thompson Commerce Bellevue, WA
Junior Software Developer - Cloud Engineering June 2019 to Nov. 2020

- Built cloud infrastructure using Terraform for scalability, cost reduction, and low overhead maintenance
- Developed microservices in Java to run in Kubernetes and serverless functions, removing the need for manual deployments
- Migrated large volumes of data from on-premise servers to Google Cloud Platform (GCP) and Azure storage such as SQL and non-relational databases, object storage, and file storage for processing data through API-first microservices
- Installed third party tools onto virtual machines in the cloud, removing the need to connect to on-premise to use such tools
- Manually tested code written by team members using Postman, ensuring requirements were met and no regressions were made before end of sprint releases to production
- Released code to production level environments to introduce new features, primarily through Jenkins pipelines
- Collaborated with clients to get insight on project requirements, and used that information to formulate sprint plans
- Documented release processes, software installations, and repository READMEs, helping reduce total time spent onboarding new team members

Sturtevant's Bellevue, WA
Ecommerce Product Specialist June 2018 to Feb. 2019

- Maintained front-end of ecommerce website
- Created informational pages for customers
- Improved efficiency of cataloging and classifying products for inventory accuracy
